

Dreamline *Sidewinder Suspension*

The Dreamline *Sidewinder Suspension* system adds a dynamic function to any Dreamline Support, S3, STX & Contour backrests.

Studies including RESNA have found that Dynamic backrests may offer many benefits to some users including **reduction in extensor tone, increased strength & trunk control, improved bowel motion, injury prevention, reduction in pain, improved sitting tolerance & protection to equipment from breakage...**

NO MODIFICATIONS TO THE WHEELCHAIR FRAME!

FEATURES

Replaceable elastomer pads

A removeable plate on the side of the Sidewinder Suspension system enables the energy absorbing elastomer pads to be changed to alter resistance levels according to the weight & activity of the user. Two elastomer pads are offered, soft (blue) & firm (orange).

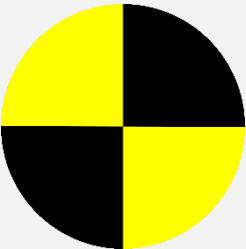

Travel & Tilt Lock

A small lever at the top of each side of the Sidewinder Suspension system locks/unlocks the movement of the backrest for safe travel in a motor vehicle or for tilt-in-space purposes.

Adjustability

The Sidewinder Suspension system is compact & the backrest still retains its width, height, depth & angle adjustability.

Crash Tested

The Sidewinder Suspension system has been successfully crash tested to ISO 71716-19 & WC20 for forward facing travel in a motor vehicle.

When occupied in a motor vehicle, Dreamline backrests must only be used on wheelchair frames which provide four anchorage points & pelvic belt anchor points which comply with the requirements of RESNA WC-4:2012, Section 19.
