■ PRODUCT OVERVIEW	26/27

At Positioning Products, we believe that everyone deserves to feel good in their body, live a healthy life, and enjoy comfort. Therefore, by paying attention to the details and listening to our clients and users, we design durable, high-quality, good-looking belts and harnesses that improve the health of wheelchair users.

HIP BELTS: BUCKLES AND ADJUSTMENTS

Incorrect seating posture can negatively affect a person's body, and could lead to pain and poor circulation, digestion, and breathing.

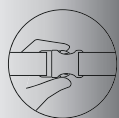

Having a good seating posture starts with positioning the pelvis, which is the basis of seating.

The initial step to good posture is to properly fit the wheelchair to the user's needs, which requires providing support under the seating surface, good sizing of the seat (not too long, not too short, not too narrow and not too wide), finding the correct height and width of the backrest, leg- and arm support.

However, sometimes, the wheelchair alone cannot solve users' postural deviation. Therefore, we have designed a wide range belts and harnesses, which can further assist in positioning the user.

Our Hip Belts come with various buckles and are either single or double-adjustable. The Hip Belts tackle problems like:

- + Posterior Pelvic Tilt
- + Anterior Pelvic Tilt
- + Pelvic Rotation
- + Pelvic Obliquity

2-POINT HIP BELTS

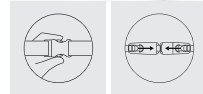

A black, padded 2-point hip belt is shown against a white background. The belt features a silver-colored metal buckle and a black plastic release button. A small, rectangular label with the text "Positive Positioning" is visible on the side of the belt. The belt is made of a black mesh material with a soft, padded interior.

The 2 - point Hip Belts Single Adjustable are designed to resolve posterior pelvic tilt. The 2 - point Hip Belts Double Adjustable are made to solve pelvic obliquity and posterior pelvic tilt. They all come with various release types (buckles), which can be chosen based on the abilities and needs of the user.

4-POINT HIP BELTS

The 4 - point Hip Belts Single Adjustable are design to resolve anterior pelvic tilt. The 4 - point Hip Belts Double Adjustable are made to solve pelvic rotation and anterior pelvic tilt. They are all made for people, who need 3 - dимensions support, and come with various release types (buckles), which can be chosen based on the abilities and needs of the user.

ALWAYS MUST BE USED IN COMBINATION WITH A HIP BELT

The Chest Positioning Stretch harnesses give trunk support and come in three different designs to meet the needs of every user.

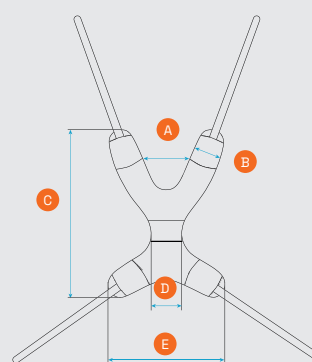

While the Chest Positioning Stretch has a wide contact area to distribute the support, X-Chest Positioning Stretch has a more local contact area and, therefore, gives central support. The Chest Positioning Zipper Stretch comes with a zipper that allows easy removal for users who frequently transfer from and to their wheelchairs.

Their products' stretchiness, which improves respiration, is achieved by carefully selecting the perfect material.

X-CHEST POSITIONING FLEX-CONTROL / NON-STRETCH

Article number: 5.71034.x
Size: S to L

Flex-Control System

The Chest Positioning Non-Stretch harnesses give more substantial trunk support than the Chest Positioning Stretch harnesses, as they have an extra reinforced layer. Their unique Flex-Control system is specially designed for users experiencing spasms. It balances freedom and security, allowing people to be fixated on one simple pull of the Flex-Control while a seizure lasts. And as soon as the moment pass through, the system can be released, and the user can enjoy comfort again.

The Neoprene Chest Belt X's wide shape positions the person's body correctly while its stretchy material allows for respiration. The belt is suitable for users who need trunk support yet freedom during movement of their shoulder area.

The Chest Belt V1 is designed to be used by people who need substantial trunk support yet freedom in the shoulder area. The product is made with a 'hook and loop' closure so that it can be easily adjusted.

The Multi-Purpose Band is a simple yet highly functional product that can be used in various ways. As the outer side of the band is entirely made from a soft 'hook and loop' material and its inner side carries two long straps of hard 'hook and loop', it can be easily adjusted to fit everyone. Also, the inner side of the Multi-Purpose band has a wide grip print that ensures the belt's correct positioning and prevents slippages.

PRODUCT CHARACTERISTICS

Our products have been designed to give postural support to our users, as having a good posture contributes to more energy at the end of the day and better health. Positioning Products' belts and harnesses are durable and designed for safe and easy use.

UNIQUE FEATURES BY KINETIC BALANCE POSITIONING PRODUCTS

At Positioning Products, the user's safety is among our top priorities. And as buckles are a key element in all our products, most of them are covered with a pocket to protect the user from their sharp edges. The harnesses have a grip print on their inner side to secure the product's correct position on the person's body and prevent unintentional movements. All Positioning Products are made from water and dirt-repellent materials, ensuring longevity. When it comes to comfort, it is essential to highlight that the webbings on our products have rounded edges and a trim strip, guaranteeing their seamless and precise mounting on any wheelchair.
